

Pelvic Floor Dysfunction

! One 30-minute session is equal to 11,000+ Kegel exercises

Muscle Strengthening:

Renasculpt utilizes advanced technology to stimulate and strengthen the muscles of the pelvic floor. This can be particularly beneficial for individuals with weakened or atrophied pelvic floor muscles, which can lead to various issues such as urinary incontinence or pelvic organ prolapse.

Improved Bladder Control:

Strengthening the pelvic floor muscles can help improve bladder control, reducing episodes of urinary incontinence. By increasing muscle tone and coordination in the pelvic floor, Renasculpt may help individuals regain control over their bladder function.

Enhanced Sexual Function:

Pelvic floor dysfunction can sometimes affect sexual function and satisfaction. Renasculpt may help improve sexual function by strengthening the pelvic floor muscles, leading to better control and sensation during sexual activity.

Pelvic Organ Support:

For individuals experiencing pelvic organ prolapse, where the organs in the pelvic area descend due to weakened pelvic floor muscles, Renasculpt may provide support by strengthening these muscles, potentially alleviating symptoms and improving quality of life.

Pelvic Floor Treatment Package

- 10 treatments for pelvic floor and abs
- Initial Assessment/Exam
- Progress Assessment and Exam
- Both target areas must be treated in each session
